ACE

Ace is a blend of acids, emulsifiers, wetters and surfactants formulated to rust from painted surfaces, stainless steel and aluminium.

Product Details

Ace efficiently removes rust and iron stains and serves as a cleaner, descaler, and brightener for metals. It also leaves a passivating film on steel to protect against re-rusting. It is practical to use, rinses off easily, and leaves a streak-free finish.

Application

Cleaning and Brightening of Aluminum and Stainless Steel - Dilute 1:10 parts water.
Rust/Scale Remover - Dilute 1:10-25 parts water, depending on amount of rust/stain/scale.

- Remove all traces of oil and grease before treatment.
- Apply by brush, spray, or dip tank (plastic, rubber-lined, or stainless steel). Always apply acids from the lowest point up. For faster results, use a scouring pad.
- Once the surface is free of rust stains or scale, rinse off with clean water. If necessary, neutralise residual acid with Eco Kleen before a final rinse.
- Avoid application in direct sunlight.

Additional Notes

- Caution when using on alloy, plastic, anodised, matt and hot surfaces.
- Always wear PPE.
- Available in 5L, 20L, 200L & 1000L.

Industry Suitability

Mining **Industrial** **Automotive & Transport**

Environmental Benefit

All products are formulated with biodegradable ingredients, ensuring minimal harm to the environment. They are inherently economical, reducing waste and promoting a healthier ecosystem.
